

Amplivite™

Nutrient Activator and Soil Catalyst

Complexed organic concentrate containing humates, plant extracts, vitamins, enzymes and bio-stimulants to promote nutrient cycling and increase plant production.

NETT CONTENTS: VOLUME		WEIGHT	SPECIFIC GRAVITY 1.1
500 ml		0.55 kg	
1 L		1.1 kg	
5 L		5.5 kg	
20 L		22 kg	
208 L		228.8 kg	
1000 L		1100 kg	

BROAD ACRE	RATE L/Ha	WATER & COMMENTS
Soil	8 - 20	With 60 - 100 L per hectare

Unique selling points:

- Balanced biological activator and digester (Liquid Compost)
- Stimulates soil micro-organisms (Fungi) in soil nutrient cycle
- Soil application for soil improvement (before or at planting of seeds, nursery seedlings)
- Product stable only under higher pH environments
- UNSTABLE – protect against sunlight and heat
- Complete organic concentrate containing humates, vitamins, micro elements and microbes to assist in soil balancing and improving overall biodiversity of soil profiles
- Improves soil structure formation – improving aeration
- Increases the water holding capacity of soil
- Promotes the conversion (chelation) of a number of elements into forms available to plants – increasing nutrient uptake
- Improves growth of various groups of beneficial micro-organisms
- Increases the permeability of plant membranes
- Root systems show greater development – promotes cell division and enlargement
- Help reduce inorganic fertilizer requirements
- Humic substances invigorates plant health
- Compound effect on soil! (3-year programme)
- More is not better – little over long time!

Unieke Bemerkingspunte:

- Vloeibare kompos
- Volledige organiese basis wat humate, vitamieë, mikroelemente en mikrobes bevat . Help om die grond te stabiliseer en die biodiversiteit van die grond te verbeter
- Stimuleer grond mikroorganismes in voedingeleem siklusse (Bio-element aktiveerder)
- Grond toediening, veral met plant – naaste aan ontkieming
- Bevat lewendige organismes – stoor weg van hitte en UV lig, beperkte raklewe
- Produk stabiel in hoë pH omgewings
- Buffer aksies teen grondkontaminasie van swaarmetale en toksiene
- Bevorder grond kwaliteit – struktuur, deurlugting en waterhouvermoë
- Bring lewe terug in “dooie” grond
- Bevorder plantbeskikbare elemente (kompleksering) vir opname deur wortels
- Saamgestelde voordele word in grond verkry waar die gereeld gebruik word
- Meer is beter oor langtermyn
